Subject Index

Acetylcholine modulation by substance P 479
Acutane effect on meibomian secretion 68
ADP-Ribosylation Factor 255
Adrenergic receptors in iris 84
Aldose reductase
  activity 625
  reductase inhibitors 381
  inhibitors 615
Amacrine cell GABA receptors 302
Amplification of photoreceptor signal 237
Anophthalmia 2
Anterior uveitis model 394
Antero-posterior organisation 6
Aqueous humour effect on immunity 508
Arachidonic Acid release by phospholipase A 92
Arachidonic Acid effect on input resistance 207
Arachidonic Acid release 96
Arginine effect on gap junctions 207
Arterial occlusion 622
Auto-immune uveoretinitis 393, 399
Axon terminals of horizontal cells 329
Axonogenesis 423

Background diabetic retinopathy 597
Baclofen 295
Biphasic horizontal cell input 321
Bipolar cell 176
  GABA receptors 299
  spectral coding 351
  mode of action 224
Birthdating studies 414
Blepharitis 68
Branched sutures 572
Branchless sutures 572
Bystander effect 403

C-*fos* circadian rhythms 276
Calcium ion action potential 211
Calcium requirement of cornea 116
Cancer-associated retinopathy 520
Capillary
  acellularity 375
  non-perfusion 601
  occlusion 621
Cataracts 456
Cholecystokinin in iris 86
Cholera toxin effect on G-protein 228
Christmas tree cataract 467
Circadian clock entrainment by dopamine 281
Circadian oscillator 269
Circadian oscillator mechanisms 278, 284
Circadian rhythm
  c-*fos* mRNA 276
  disk shedding 274
  dopamine 273
  iodopsin transcription 275
  melatonin 272
  serotonin 272
  tryptophan hydroxylase mRNA 275
  visual sensitivity 272
Coherent reflectance confocal microscopy 534
Collagen fibres in stromal edema 133
Colour discrimination in horizontal cells 162, 170
Conductance changes in cones 144
Cone
  conductance changes 144
  feedback from horizontal cells 330, 338
  feedback spikes 147
  input to horzontal cells 317
  modulation of horizontal cells 336
  response time characteristics 186
  synaptic mechanism 143
Cone depolarizing response 143
Confocal microscopy 528
  principles 528
Contact lense effects on meibomian secretion 60, 68, 70
Corneal
  calcium requirement 116
  development 111, 113
  endothelium ion channels 123
  endothelium permeability 120, 121

endothelium resting voltage 123
hydration 111, 130
nutrition 110
osmotic forces 127
stroma composition 131
Cosmetic effect on meibomian secretion 70
Cotton-wool spot 367, 602
Cultured retinal capillary pericytes 438
Cyclic AMP
effect on gap junctions 203
effect on input resistance 203
effect on light responses 203
Cyclic GMP
coupled to glutamate receptor 227
effect on gap junction 207, 208
in on-bipolar cells 231
phosphodiesterase in on-bipolar cells 229
Cylopia 2
Cytoid body 367

Degeneration by disruption of circadian rhythm 284
Dendritic
emergence of classes 419
exuberance 421
morphology 417
outgrowth 419
remodelling 421
Diabetic
cats 604
disorders 362
dogs 604
primates 604
retinopathy 594
development 362
incidence 595
lesions 599
mechanisms 623
models 602
rodents 603
Diacylglycerol-Protein Kinase C 623
Disk shedding circadian rhythms 274
Disruption of circadian rhythm 284
Donor cornea permeability 121
Dopamine
circadian rhythms 273
entrainment of circadian clock 281
interplexiform cells 199
role in dark adaptation 349
Dorso-ventral
disproportions 22
organisation 3
Dry eye 52, 66

Eicosanoids in iris 86
Electrical synapse in feedback transmission 161
Endothelial cell hypertrophy 601
Endothelial permeability of cornea 120, 121
Endothelin in iris 85
Extraretinal vessel-glial proliferation 602
Eye malformations 27

Fate maps 2
Fate of ocular field 17
Feedback relevance 188
Feedback spikes in cones 147
Feline melanoma model 511
Fibre fold ultrastructure 458
Fibre folds 458
Fibre-based cataracts 456
Fibroblast growth factor 383
Floor plate development 11
Fluorescent probes in confocal microscopy 557
Fluorophore photobleaching 557
Flurescein angiography 365
Focus wavelength coding 549
Four dimensional confocal microscopy 550
Fuchs dystrophy 120
Fusiform fibers 585

G protein 76, 90
subunits 89
affected by cholera toxin 228
affected by pertussin toxin 228
functions 250
GABA
agonists 294
antagonists 295
effect on calcium channels 305
receptor
mechanism of action 296, 308
types 293, 296
in amacrine cells 302
in bipolar cells 299
in ganglion cells 300, 302
role as feedback transmitter 156, 182
Galactose-fed dogs and rats 605, 606, 612

Ganglion cell
death 416
death and growth factors 417
GABA receptors 300, 302
Gap junction
affected by arginine 207
affected by cyclic GMP 207
affected by cyclic AMP 203
affected by intracellular messengers 217
affected by transmitters 217
modulation by second messengers 198
Genetic component in retinopathy 382
Glaucoma treatment with prostaglandins 87
Glial-vitreal contraction 599, 602
Glucose effects on membrane voltage 443
Glutamate concentration
in off-bipolar cells 235
in on-cells 236
Glutamate receptor
coupled cGMP cascade 227
in off bipolar-cells 241
in on-cells 241
Glutamate receptors of off-bipolar cells 224
Glutamate receptors of on-bipolar cells 225
Glycated hemoglobin 381
Goblet cells 51
Green hamster melanoma model 510
Growth factors in ganglion cell death 417
GTP-binding protein 254

Hard exudates 601
Harderian glands 49
Horizontal cell
coupling 328
functions 314
input from cones 317
responses 200
responses to the dark 346
spatial properties 344
spectral properties 335
types 315
discriminate colours 162
feedback to cones 330, 338
modulated by cones 336
modulated by interplexiform cells 329
spectral coding 332
5-HT receptors in iris 87
Hyperglycemia effects on genes 382
Hyperglycemia in retinopathy 377
Hyperlateralization 25
Hypolateralization 25
Hypophysectomy 387

Immune system in anterior chamber 506, 507
Inositol phosphate metabolism 78
Inositol triphosphate production in iris 83
Inositol triphosphate release of Ca^{2+} 94
Input resistance affected by arachidonic acid 207
Input resistance affected by cyclic AMP 203
Insulin effects on pericytes 445
Insulin-like growth factor 384
Insulin treatment of diabetic retinopathy 619
Interplexiform cell 199
Interplexiform cells modulate horizontal cells 329
Intra-ocular tumour rejection 515
Intracellular messenger effects on gap junctions 217
Intraretinal hemorrhages 601
Intraretinal microvascular abnormalities 601
Iodopsin transcription circadian rhythms 275
Ion channels in corneal endothelia 123
Ionotropic receptors 224
Iris
5-HT receptors 87
adrenergic receptors 84
cholecystokinin 86
eicosanoids 86
endothelin 85
muscarinic receptors 81
neurokinin A 85
peptidergic receptors 85
production of inositol phosphate 83
prostaglandins 86
serotonergic receptors 87
Ischemic necrosis 519

Large field units 168
Laser scanning confocal microscope 534
Lateral eye development 16
Lens
embryology 570
fiber shape 568
sutures 569
LiCl effect on development 22, 26

Light response affected by cyclic AMP 203
Line sutures 580
Lineage tracing 414
Lipid layer thickness 61

Macular edema 369, 596
Measurement of reversal potential 200
Medio-lateral organisation 10
Meibomian gland 49
  dysfunction 67
  secretion
    contact lenses 60, 68, 70
    cosmetics 70
    pollution 56
    tetracycline 58
    biosynthesis 56
    composition 54, 55
    control 58
    delivery 60
    diurnal variation 62
    function 54
    melting point 63
    pheromones 65
    surface tension 63
    volume 61
    with Acutane 68
Melanoma animal models 509
Melatonin circadian rhythms 272
Membrane voltage
  and glucose 443
  and vasoactive substances 440
  of pericytes 440
Mesoderm induction 3
Microaneurisms 365, 374
Monophasic horizontal cell input 318
Mouse neoplasm model 512
Murine melanoma model 510
Muscarinic receptors in iris 81

Neovascular glaucoma 369
Neovascularisation 376, 383
Neural induction 3
Neurogenesis 414
Neurokinin A in iris 85
Neurotransmitter effects of substance P 475, 490
Non-coherent confocal microscopy 529
Non-enzymatic glycation 381
Non-opaque lens defects 456
Non-resolving vitreous hemorrhage 596

Ocular field fate 17
Ocular immune system 506
Off-bipolar cells
  glutamate concentration 235
  glutamate receptors 224
  glutamate receptors 241
Office eye syndrome 69
On-bipolar cells
  cGMP 231
  cGMP phosphodiesterase 229
  glutamate concentration 236
  glutamate receptors 225
  glutamate receptors 241
Optic axon
  development 20
  pathfinding 20, 21
Optic cup development 19
Osmotic force in cornea 127

Pan-retinal photocoagulation 385
Patch clamping retinal capillary pericytes 439
Pathfinding by optic axon 20, 21
Peptidergic receptors in iris 85
Pericyte ghosts 606
Pericyte loss 372
Peripheral anterior synechiae 369
Pertussis toxin effect on G-protein 228
Phosphoinositide metabolism 77
Phospholipase A release of arachidonic acid 92
Phospholipase C purification 90
Phospholipase D stimulation 91
Photocoagulation 384
Photoreceptor coupling 328
Photoreceptor signal amplification 237
Potassium channels in pericytes 444
Pre-proliferative retinopathy 366
Precorneal tear film 50
Primary fibre development 570
Proliferative diabetic retinopathy 363, 597
Proliferative retinopathy 367
Prolonged depolarisations 150, 154
Prostaglandin
  effect in glaucoma 87
  iris 86

Proteoglycan role in cornea 133

Rab proteins 252
Radiation retinopathy 614, 622
Redox potential 624
Resting voltage in corneal endothelium 123
Retinal capillary pericytes 438
Retinal microangiopathies in diabetic retinopathy 598, 605
Retinal pericyte ghosts 628
Retinal terminal shaping 428
Retinoic acid as a morphogen 8, 9, 13, 18, 26
Retinopathy caused by hyperglycemia 377
Retrodot 463
  subtypes 467
  ultrastructure 466
Retrovirus melanoma model 511
Reversal potential measurement 200
Rho proteins 259
Rhodopsin-bearing post-Golgi membrane 253
Ricco's law 344
Rubeosis iridis 369

Saccular microaneurysms 610
Scanning slit confocal microscopes 532
Second messenger modulation of gap junction 198
Second messengers in iris 79
Secondary fiber development 570
Serotonergic receptors in iris 87
Serotonin circadian rhythms 272
Sick building syndrome 69
Sign inverting cone input 319
Signal transduction 76
Silent substitution stimulus 334, 340
Sirenomelia 2
Small field units 168
Small G-protein functions 251
Sorbitol pathway involvement with neuropathy 380
Spatial properties of horizontal cells 344
Spectral coding
  in horizontal cells 332
  of bipolar cell types 351
Spectral properties of horizontal cells 335, 339
Spectral sensitivity changes to the dark 347
Star sutures 585
Stroma composition in cornea 131

Substance P
  antagonists 483, 484
  as neurotransmitter 475, 490
  control of pupil 491
  discovery 474
  distribution in eye 490
  effect on intra-ocular pressure 493
  mitogenic effects 47
  modulation of acetylcholine 479
  non-peptide antagonists 485
  receptor
    agonists 479, 481
    mechanism 488
    structure 487
    subtypes 488
  role in ocular development 495
  secretory effects 477
  structure 475
  vasoactive effects 475
Sugar cataracts 605
Sustained hyperpolarisations 149
Sustained oscillations 174
Synaptic mechanism in cones 143
Synaptic voltage gain 237
Synophthalmia 2

Tachykinin receptors 487, 491
Tandem scanning confocal microscope 529, 543
Tarantula spider hair 540
Tear film
  function 50
  in precornea 50
  structure 51
Tear viscosity 66
Telodendrite function 327
Temperature effects on channel gating 125
Tetraphasic horizontal cell input 322
Three-dimensional imaging 546
Time characteristics of cone response 186
Traction retinal detachment 596
Trans-Golgi network 256
Transmitter effects on gap junctions 217
Treatment of diabetic retinopathy 615
Triphasic horizontal cell input 321
Tryptophan hydroxylase mRNA circadian rhythms 275
Tumour immunity 509
Tumour rejection 515

Two-photon imaging 559
Types of bipolar cell 351

Uveitis induction mechanisms 405

Vacuole ultrastructure 463
Vacuoles 461
Vascular endothelial growth factor 384
Venous occlusion 622
Vessel glial proliferation 599
Visual sensitivity circadian rhythm 272
Vitrectomy 387

Water cleft ultrastructure 460
Water clefts 460

Y sutures 582

Zones of discontinuity 589
